Mountain Weather Forecast

Bannau Brycheiniog (Brecon Beacons) National Park

Forecast valid from 00:00 on Monday 09 Sep 2024 until 23:59 on Tuesday 10 Sep 2024

Forecast Issued on Sunday 08 Sep 2024 at 15:11

Confidence: High for a much drier start to the new week and for a change to more unsettled conditions from Tuesday. Moderate for shower details from mid-week and wind strengths and for the details of any more general rain on Tuesday evening.

Headline for Monday 09 Sep 2024: Bright and breezy with sunny spells, these prolonged at times.

Mountain weather hazards on Monday 09 Sep 2024

20%	20%	10%	10%	<05%	00%	<05%	10%

Forecast for Monday 09 Sep 2024

Weather: A much brighter day is in store compared to on Sunday. Broken cloud and sunny intervals from first light with cloud amounts continuing to reduce to give increasingly frequent sunny spells, these prolonged during the afternoon.

Chance of cloud-free hill tops above 600m: 60% soon becoming greater than 95%.

Low cloud and visibility: Patches of cloud may shroud some hills above 600-700m at first, this quickly lifting and clearing. Locally poor visibility first thing in any cloud

Meteorologist's View

After Sunday's very wet weather, Monday will be a vastly improved day for hill walking with excellent visibility and distant views. Bear in mind though that there may well still be standing water on paths and the ground may be waterlogged in places. It will be a much cooler day with the strong northwesterly winds on the summits giving a noticeable wind chill. Despite it feeling cool, UV levels will be high during the midday hours on the summits so sun protection is advised.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Sun 08 Sep 2024	17.2mm	25.8mm	38.8mm

Forecast for Tuesday 10 Sep 2024

Weather: A cloudier day is in store with sunny or bright intervals during the morning and a chance of showers. Probably more frequent showers or longer spells of rain through the afternoon, but there remains some uncertainty in the details. The evening is likely to be the wettest part of the day.

Maximum wind: Westerly or northwesterly 30 mph with gusts of 40-45 mph possible on the summits, though winds could ease for a time later.

Chance of cloud-free hill tops above 600m: 60% during the morning, becoming 40% during the afternoon.

Low cloud and visibility: Periods of cloud above 700m, mainly in association with showers, but probably becoming more extensive and persistent above 500-600m from mid-afternoon onwards. Generally good visibility, but occasionally moderate in showers or rain and poor in any cloud.

Temperature: **Valleys:** Plus 10 Celsius rising to plus 16 Celsius.
At 600m: Plus 10 Celsius.
Freezing level: Above the summits.
